

Coseismic offsets for the April 14-15 2016 Kyushu earthquake sequences. Triangles are Japanese GEONET GPS sites. Original GEONET RINEX data are provided to Caltech by the Geospatial Information Authority (GSI) of Japan. ARIA data analysis used GIPSY-OASIS software and JPL rapid orbits. The offsets are estimated using 4-days daily solutions before earthquake (2016/04/14) and 2-days daily solutions after earthquake (2016/04/15).
